Giovanni Cascio

Boise, Idaho | (208) 283-3410 | giovannicascio@u.boisestate.edu | www.linkedin.com/in/giovannicascio

Education

Boise State University
Bachelor of Science in Computer Science, Emphasis in Cyber Security | Minor in Chinese Studies
Expected Graduation: May 2028

Providence University (Jun - July 2025)
Chinese Mandarin Immersion Program

Experience

Chip Ambassador
Microelectronics Education and Research Center (August 2026 - Present)

- Represent the center at academic panels, networking events, and campus showcases to connect students with semiconductor career pathways and research opportunities.
- Translate complex microelectronics concepts, lab workflows, and semiconductor manufacturing fundamentals into accessible presentations for diverse technical and non-technical audiences.
- Coordinate university-sponsored workshops, career panels, and campus events to drive student awareness and engagement in regional chip technology initiatives.

STEM Coach
Summit Innovation Lab (February 2026 – August 2026)

- Educated and mentored students (ages 5–12) in foundational physics, 3D CAD modeling, 3D printing, and drone mechanics through hands-on engineering challenges.
- Designed interactive Minecraft logic and robotics modules that simplified complex engineering concepts, building early problem-solving skills and team collaboration.

Resident Assistant
Boise State University Housing and Residence Life (August 2025 - May 2026)

- Managed a 70+ student residential community, actively fostering an environment of inclusion, safety, and academic success.
- Mediated conflicts and provided crisis response following university housing protocols, FERPA, and Title IX standards.
- Planned and facilitated community-building events to enhance engagement and retention within residence halls.

Projects

FIRST Robotics Competition #2594 (2021 - 2024)

- Led an 8-member programming subteam to design and deploy autonomous and teleoperated robot control systems using Java and WPILib.
- Implemented a computer vision system using Limelight hardware to read AprilTags, enabling real-time robot localization and odometry for autonomous pathfinding.
- Streamlined code development through GitHub version control and Agile collaboration practices.
- Mentored new programmers on Java fundamentals, robotics frameworks, and troubleshooting techniques.

Skills

Additional Technologies: Python, C, JavaScript, HTML, CSS, Fusion360, Microsoft Office Suite, Adobe Suite
Languages: Intermediate Chinese Mandarin
